TITLE: Naturally biodegradable polyester compsns. - contain

aromatic and aliphatic units, pref. derived from

aliphatic diol and mixture of aromatic and aliphatic di

carboxylic acids.

BASIC ABSTRACT:

DE 4432161 A UPAB: 19960503

Polyesters (I) which are biodegradable under natural conditions by the action of microorganisms (e.g. as described in DIN 53739D) comprise polycondensation prods. with statistically distributed or alternating monomer units, derived from: (a) a mixture of aliphatic and aromatic polyols and an aliphatic polycarboxylic acid or, (b) an aliphatic polyol, possibly with an aromatic polyol, and a mixture of aromatic and aliphatic polycarboxylic acids, or (c) an aromatic hydroxy-monocarboxylic acid and an aliphatic hydroxymonocarboxylic acid.

USE - Used as biodegradable synthetic polymers, e.g. in the form of film or other prods.

ADVANTAGE - The compsns. provide synthetic polymers which combine the good biodegradability of fully aliphatic polyesters with the good thermal and mechanical properties of fully aromatic polyesters. Dwg.0/8
